

AMENDMENTS TO THE SPECIFICATION

Please replace page 9, lines 14-27 and page 10, lines 1-4 with the following paragraph rewritten in amendment format:

Upon receipt of the communication data written in the TCP/IP format, the exclusive server 7 determines whether both IDs, ~~the P-ID~~ a provider's IP address (P-IP) and the M-ID, are justifiable or not. This process is performed to check whether a user who is not under the service of the provider is trying to enter the exclusive server 7 and whether a user who is using the phone made by other makers is seeking an access to the exclusive server 7. If both the ~~[[P-ID]]~~ P-IP and the M-ID are justified, the exclusive server 7 allows the user to download the requested page-A as a HTML (Hyper Text Makeup Language) source file. The HTML source file is downloaded into a RAM in the memory 18 of the mobile phone 2. Then, the browser 3 analyzes a code of the HTML file, and displayable information is displayed on the display panel 11. If image data such as picture data are included in the source file, such image data are requested to be sent to download the same in the phone 2. The data downloaded in the phone also includes sound data such as music.
